Table of Contents

1 - Discovery Tasks

This table contains a listing of all tasks which were performed as part of this assessment. Items which do not contain a check were not performed.

	Task	Description
✓	Detect Domain Controllers	Identifies domain controllers and online status.
✓	FSMO Role Analysis	Enumerates FSMO roles at the site.
✓	Enumerate Organization Units and Security Groups	Lists the organizational units and security groups (with members).
✓	User Analysis	Lists the users in AD, status, and last login/use, which helps identify potential security risks.
✓	Detect Local Mail Servers	Detects mail server(s) on the network.
✓	Detect Time Servers	Detects server(s) on the network.
✓	Discover Network Shares	Discovers the network shares by server.
✓	Detect Major Applications	Detects all major apps / versions and counts the number of installations.
✓	Detailed Domain Controller Event Log Analysis	Lists the event log entries from the past 24 hours for the directory service, DNS server and file replication service event logs.
✓	SQL Server Analysis	Lists the SQL Servers and associated database(s).
✓	Internet Domain Analysis	Queries company domain(s) via a WHOIS lookup.
✓	Password Strength Analysis	Uses MBSA to identify computers with weak passwords that may pose a security risk.
✓	Missing Security Updates	Uses MBSA to identify computers missing security updates.
✓	System by System Event Log Analysis	Discovers the five system and app event log errors for servers.
✓	External Security Vulnerabilities	Lists the security holes and warnings from External Vulnerability Scan.

10 - Patch Summary

This section contains the patching status of computers determined through the Microsoft Baseline Security Analyzer and Windows Update. MBSA gathers data through a remote scan and looks primarily for Security Updates. Windows Update checks the local computer for all non-hidden updates. Missing updates in both areas are highlighted in red. Security and critical updates are bolded.

11 - Endpoint Security and Backup

This section contains a listing of detected anti-virus, anti-spyware, firewall, and backup information as detected through 🛡️*Security Center* and/or 🔍*Installed Services* for major vendors, which is then categorized by domain or workgroup membership.

Values in the 'Name' column contain either the name of the product, None indicating the that machine returned information but no product was found, or <empty> indicating that information was not obtainable. Additionally, a status of ✓ indicates 'yes', ✗ indicates 'no', and <empty> indicates that a status was not available.

15 - Internet Domain

This section contains the WHOIS and MX records for domains added to this assessment. WHOIS information helps determine domain ownership and renewal, while MX records indicate the server responsible for handling email requests (this may redirect elsewhere if acting as a spam filtering service).

The SSL connection request has failed. 10-25-2016 9:43:03 PM 1073741828 The Kerberos client received a KRB_AP_ERR_MODIFIED error from the server rdgateway$. The target name used was RPCSS/RDGateway. This indicates that the target server failed to decrypt the myapp provided by the client. This can occur when the target server principal name (SPN) is registered on an account other than the account the target service is using. Please ensure that the target SPN is registered on, and only registered on, the account used by the server. This error can also happen when the target service is using a different password for the target service account than what the Kerberos Key Distribution Center (KDC) has for the target service account. Please ensure that the service on the server and the KDC are both updated to use the current password. If the server name is not fully qualified, and the target domain (CORE.myco.COM) is different from the client domain (CORP.myco.COM), check if there are identically named server accounts in these two domains, or use the fully-qualified name to identify the server. ***Last 5 Application Error Msgs:*** 10-25-2016 8:59:18 AM 4 An unexpected error has occured in "QuickBooks: Premier Professional Services Edition 2015": V25.0D R6 (M=1066, L=335, C=249, V=0 (0)) 10-24-2016 2:28:04 PM 4 An unexpected error has occured in "QuickBooks: Premier Professional Services Edition 2015": DMError Information:-6120Additional Info:The maximum number of accts allowed to access the company file has already been reached. 10-24-2016 1:28:05 PM 4 An unexpected error has occured in "QuickBooks: Premier Professional Services Edition 2015": DMError Information:-6120Additional Info:The maximum number of accts allowed to access the company file has already been reached. 10-24-2016 1:17:57 PM 4 An unexpected error has occured in "QuickBooks: Premier Professional Services Edition 2015": V25.0D R6 (M=1066, L=335, C=249, V=0 (0)) 10-24-2016 1:17:13 PM 4 An unexpected error has occured in "QuickBooks: Premier Professional Services Edition 2015": V25.0D R6 (M=1066, L=335, C=249, V=0 (0)) ***Scheduled Tasks:*** Adobe Flash Player Updater ShadowCopyVolume{ee50fa41-6158-11e5-8160-00155d01e081} VIPRE Roaming Agent Upgrade Task ***Remote Listening Ports:***
